

Moon Observation Board

Name _____

Month _____

Directions: Observe the moon in the night sky and its phase over a period of two months (you will need two of these charts). Ask an adult to help observe the moon at night or look online to see the current moon phase. Draw the shape of the moon in the circle template and mark down which date and time this shape was seen. As the moon changes shape, your teacher will provide a new vocabulary word to describe that phase of the moon.
