

# Scientific Observation

When we study science, we need to use all our senses to make observations about the world around us. We can discover a lot of information just by paying close attention to what we observe. Take a moment to list some of the senses you can use to help you make excellent scientific observations.

Observe the glasses of liquid your teacher has prepared. Fill out the chart below with all the possible observations you can make about each liquid:

Liquid 1	Liquid 2	Liquid 3
